Weatherstrips

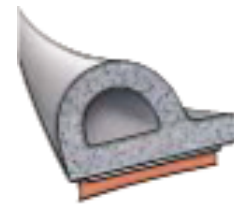

Back

Self-adhesive weatherstrip is made from cellular rubber to achieve the best possible adhesion between tape and strip. It is also very easy to fit. This is an important characteristic since self-adhesive sealing strips are the one most widely used by DIY customers.

The use of EPDM rubber ensures that these products combine a very long life expectancy with excellent value for money, so you need a very special reason to choose anything else.

The extensive range of applications has enabled us to develop a wide selection of sizes and colours.

The adhesive layer consists of a double-sided reinforced tape with a silicone-coated backing paper. Self-adhesive sealing strips adhere well to most materials, including wood, plastic and metal. The critical factor in achieving a good result is that the surface is clean and dry.

Joint/Caulking strip

Joint strip

Joint strip is used in expansion joints in accordance with the materials description in Swedish building regulations Hus AMA 72. It is also used to provide wind-proofing and a vapour barrier.

- EPDM cellular rubber with its established benefits, i.e. ease of use, resistance to ageing, sealing ability, etc.
- Does not produce toxic fumes in the event of fire
- Hollow, soft and elastic - accommodates movements in joint
- Made from black EPDM cellular rubber

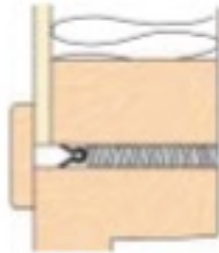

Product no.	Dim. O.D. \varnothing x I.D. \varnothing , mm	For joint width, mm	Each length, m	Pack. qty.
48053300	13 x 8	7 - 11	40	400
48053310	18 x 11	11 - 15	40	240
48053320	25 x 18	15 - 21	20	160
48053330	35 x 28 6 spokes	21 - 30	20	80

Caulking strip Frame/Wall

D2-strip

D2-strip is a wind and vapour barrier that is fitted between the window frame and wall. The strip is fitted from the inside, providing an excellent seal and eliminating condensation.

The material - black EPDM cellular rubber with closed cells and a continuous skin - remains resilient down to -40°C and is therefore easy to fit. It accommodates any movement in the joint and will provide a perfect seal for many decades.

Product no.	Joint width mm	Code	Dimensions mm	Each length m	Pack. qty. Box
48060280	7-13	D2-strip	13 x13	50	500
48060290	10-18	D2-strip	21 x21	50	300
48063380	16-27	D2-strip	30 x30	25	150

Wall section and sealing strip

Back

Sealing with rubber strips offers numerous benefits. They seal out moisture, cold, wind, and noise. Thanks to the closed cell structure they also provide good thermal insulation. They are also water-repellent. These sealing strips have good resistance to settling and excellent ageing resistance.

The strip is fitted with the vapour barrier upwards. This simplifies the fitting and adjustment of wall sections.

- Rubber strips can be individually positioned on vapour barrier to suit dimensions of wall studs.
- Vapour barrier widths up to 500 mm provide a barrier to moisture under the full thickness of the wall and allow overlapping with plastic floor barrier.
- Recommended when erecting preassembled modular wall sections.

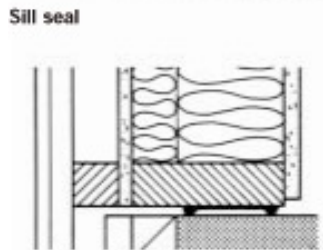

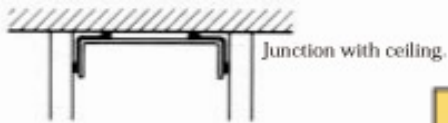

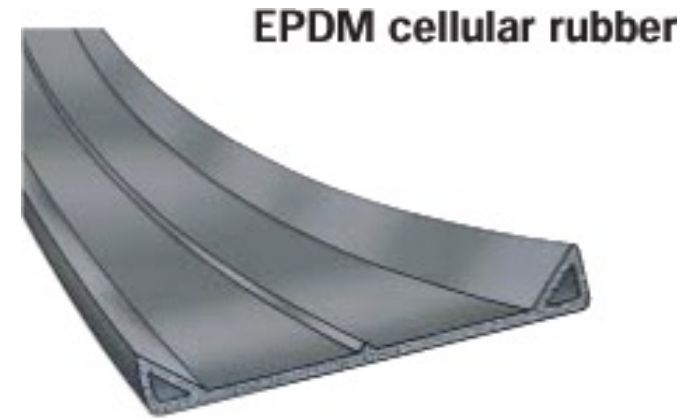

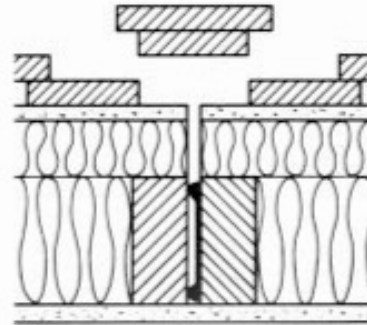

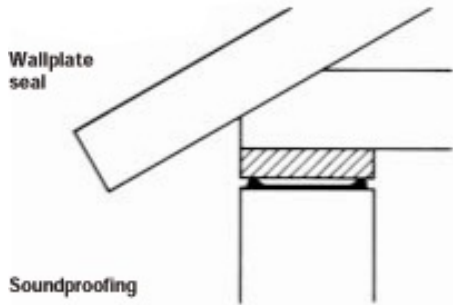

Profile	Product no.	Dimensions mm width x height	Colour	Pack.	Qty. m	Pack. qty. m

Bold type = stock item

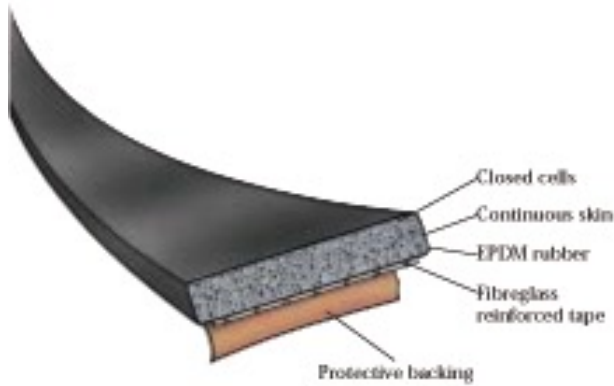

- Takes up movement in joints and construction elements
- Provides weatherproofing and thermal insulation
- Thanks to strip profile and resilience of cellular rubber the sill sealing strip provides an excellent seal even under slight compression
- Made from black EPDM cellular rubber with closed cells and continuous skin, to ensure high quality
- Exceptional resistance to ageing
- Design of profile/strip is copyrighted and patent is pending
- Used as soundproofing between wall and roof
- Replaces materials such as plastic, corrugated paper, mineral wool or glass wool.
